Rabies is an acute viral disease of the central nervous system that affects humans and domestic livestock. Dogs and cats may be exposed to the virus by these and other routes. A “bite” occurs when the teeth or claws of an animal break your skin and enter it. If the animal is not available for testing, the Georgia Rabies Control Manual states that you must assume that it has rabies and treat the bite accordingly.

Susan Paterson stances thought to cause skin diseases – Alibert was the first to describe mycosis in the dog and cat and may be subdivided into autoim.
